

# THK Linear Bearing Slide Guide Block

Linear Guides are [a block and rail system](#) that helps support the motion of an application.

## How linear Guides Work

There are two parts to the Linear Guide System: the Linear Block and the Linear Rail. The linear block moves along the linear rail along the plane the rail is positioned for. The block moves forward and backward along the straight linear rail. Linear blocks connect to the moving components by mounting to the block to support the motion for the specified component. The motion is created along the rail through recirculating ball bearings within the block that is contacted on the rail.

## Basic Types of Linear Guides

Two basic types of linear guides are predominantly used in industry today. These types are: sliding contact linear motion bearing and rolling element linear motion bearing guides. The main distinction between the two is how the motion of the linear block occurs along the linear rail.

## Specification of Linear Guide Rail :

Model No.	Outer dimensions			Basic load rating					
	Height	Width	Length	Radial		Reverse radial		Side	
	H mm	W mm	L mm	Dynami c	Static	Dynami c	Static	Dynam ic	Static
				rating	rating	rating	rating	rating	rating
			C	C0	CL	C0L	CT	C0T	
HSR 20LA	30	63	90	21.3	31.8	21.3	31.8	21.3	31.8
HSR 20LAM	30	63	90	21.3	31.8	21.3	31.8	21.3	31.8

## Applications that Use Linear Guides

Linear guides are used to move a machine table in either the X or Y direction. Applications which require high precision use linear guides due to their high accuracy and precision capabilities.
